

The network behind the world's top networks

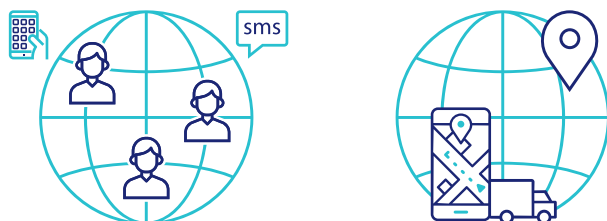

USE CASE

BICS GLOBAL ROAMING: IOT AND MOBILE NUMBERS

Customer

Travel SIMs that connect either employees or devices that move around the world are enabling enterprises to launch and manage a connected operation on a global scale. Global organizations often run a highly geographically dispersed operation with employees travelling to remote areas. The organization's primary responsibility is to ensure that the employee is reliably connected and contactable at all times, for safety as well as operational reasons. An international SIM with a mobile number delivers worldwide data, messaging and voice connectivity, as well as contactability. By combining data and mobile connectivity with mobile numbers, organizations can access a complete solution to remain in constant contact with employees.

Applications

Enterprises need to enable collaboration and reachability via voice, SMS and data connections for employees anywhere in the world, including remote areas. They must also implement seamless global traceability, to remain informed about the whereabouts of remote employees wherever they are.

Requirements

- Guaranteed global connectivity with multi-network coverage
- Contactability via mobile numbers enabling two-way communications
- Mobile connectivity with satellite back up
- Flexible and scalable platform
- Simple global tariff for predictability in operating expenses

Solutions

BICS Global Travel SIM for Things solution, combined with Mobile Numbers, offers flexible, reliable and comprehensive worldwide coverage and international connectivity, for enterprises that need to keep their employees connected at all times.

Reliable connectivity anywhere

A connected business with a dispersed workforce must ensure that its employees and assets can connect wherever they are. With built-in connectivity, BICS Global SIMs offers reliable connectivity with multi-network coverage, leveraging BICS' extensive relationships with operators worldwide

Contactability

Organizations with mobile employees need to ensure reliable contactability for worker safety and operational efficiency in remote areas. BICS Mobile Numbers are available in more than 12 countries. Mobile Numbers are compliant with all relevant regulations, so enterprises don't need to worry about licensing requirements.

Ease of deployment and management

The BICS Global SIMs solution needs just one contract, one global tariff and works on any device for worldwide coverage. The self-serve easy-to-use dashboard enables a clear view and efficient cost management of the spend per employee or SIM. Pre-emptive measures can also be taken for potential coverage gray areas, ensuring proactive action can be taken. Mobile Numbers can be self-provisioned through an online portal.

Results

BICS Global SIMs combined with Mobile Numbers offers a complete global connectivity solution for a globally dispersed workforce through one provider. Enterprises can ensure the safety of their remote employees and assets by enabling global roaming for any employee from the word go. By utilizing just one provider, enterprises don't need to negotiate individual operator contracts per region, reducing costs and saving time with a simple tariff for user convenience.
