

To ensure optimal performance of large IoT projects covering multiple geographies, you need visibility, insight, and control over your connected devices. BICS SMART Webvision has been specifically developed to provide large IoT enterprises with the capabilities to identify, investigate, and resolve issues in a light-touch and low-cost model.

## Identify, investigate, and resolve issues with a light-touch model

- Global infrastructure, global reach, global organization
- 360° visibility of device performance
- Real-time 3G/4G network performance monitoring
- · Network, traffic, and business intelligence
- Live subscriber tracking and management

## Greater visibility of traffic with sophisticated reporting

Fully owned and developed in-house by BICS to support large IoT projects, BICS SMART Webvision enables network, operations, marketing, and management teams to ensure deployments are running optimally.

Completely flexible and customizable, the solution allows you to select the level of granularity you need for analysis and reporting via a range of modular options.

### **Network**

Proactive network and service performance monitoring

### **Operations**

Measure and control operational efficiency

### Marketing

Business and customer intelligence

### Management

Global visibility on technical and operational health

## **Ensuring Quality of Service**

## **Key features of BICS SMART Webvision**

Single source of real-time information on your international IoT deployment

Detailed transaction-level data

Aggregated historical data

Gain full control over your connected business via a global network of more than 400 mobile operators

## No.1 roaming provider in the world

Fully owned global infrastructure, regional platforms, and global support teams

### **API-based deployment**

All functions available through APIs, with flexible customization

# Analytics and business intelligence

Optimize deployment performance

## Optimized wholesale business model

Backed by BICS' unique roaming exchange platform for M2M/IoT

## End-to-end selfmanagement portal

The central enabler for your connected business

Cross-technology traffic analytics

**Modular platform** 

**Cloud-based**No CAPEX, maintenance, or upgrade costs

Ensure your customers receive the highest quality experience by tracking the connectivity of thousands of devices around the world. Proactively detect traffic and potential issues in real time, to identify and resolve before they impact quality of service. Build the business and customer intelligence capabilities of your IoT deployment with minimal effort, cost, and resources, with BICS.
